IE Discovery Announces Update to InfoDox™ Discovery Management Platform

Significant enhancements allow attorneys to verify accuracy of duplicate and near-duplicate technology and ensure consistency of review work product

Austin, Texas (May 5, 2008)—IE Discovery, a leading provider of Comprehensive Discovery Management solutions to the legal community, announced today that it has released an upgraded version of its InfoDox™ platform. This release provides significant improvements in functionality, including the following:

- **Duplicate Reviews.** Users can now review potential duplicate documents side-by-side, verifying the logic used to identify duplicates and near-duplicate documents. Identifying duplicates early in the process provides more efficiency and consistency to subsequent legal reviews. Reviews can also be completed more quickly and with fewer resources since documents flagged as duplicates can be excluded from future reviews or marked as their duplicate counterparts.
- **Customizable Review Instructions.** Review-specific instructions can now be built into the review interface, providing more consistent work product across reviewers and allowing review leads to modify instructions more quickly.

IE Discovery relies on its own industry leadership as well as user input to consistently improve InfoDox. “We strive to provide our clients with the most comprehensive Discovery Management platform possible to facilitate a speedier and more accurate legal review.” said Chris May, CEO of IE Discovery.

The update to InfoDox is the latest in a series of technology improvements at IE Discovery, spurred by a recent increase in spending on research and development. “We have dedicated ourselves to providing customers with the best possible technological experience,” said Bill Detamore, IE Discovery’s Chief Legal Officer. Other recent innovations include substantially increasing the company’s processing and hosting capacity and providing cutting-edge solutions for identifying near-duplicate documents.
